## **ABSTRACT**

The present invention provides a method of treating prostate cancer comprising administering to a patient in need thereof a therapeutically effective amount of a compound of the formula (I)

$$\begin{array}{c}
 & H \\
 & N \\
 & N \\
 & R^2
\end{array}$$
(I)

wherein R<sup>1</sup> and R<sup>2</sup> are each independently hydrogen or C<sub>1</sub>-C<sub>4</sub> alkyl; or a pharmaceutically acceptable salt thereof.

In a second embodiment, the invention provides a method of treating androgenindependent prostatic adenocarcinoma comprising administering to a patient in need thereof a therapeutically effective amount of compound of formula (I) or a pharmaceutically acceptable salt thereof.

In a third embodiment, the invention provides a method of treating an AKT-mediated disease selected from the group consisting of glioblastoma, colon cancer, pancreatic cancer, ovarian cancer, endometrial cancer, and renal cell cancer, comprising administering to a patient in need thereof a therapeutically effective amount of compound of formula (I) or a pharmaceutically acceptable salt thereof.
